

Biodiversity climate adaptation

3CMP Links

1990-2050

Central Slopes Cluster

SUMMARY

3CMP Links benefits are areas of high biological turnover according to the 3CMP model. These are areas where the model shows that not only does the bio-climatic envelopes shift, but according to the 3CMP, which simulates the ability of biodiversity to remain viable and colonise new 'climate-space', these areas are expected to be colonised and allow biodiversity to move through.

LEGEND

3CMP Link Benefit

- East Coast, Central Slopes & Murray Basin Clusters
- NRM Boundaries
- Central Slopes Cluster
- Cities
- Major Rivers
- Principal Roads

Models and map production by OEH NSW; GDM compositional turnover modelling by CSIRO Ecosystem Sciences; with funding from the Australian government.
